

## Superb Lyrebird *Menura novaehollandiae*

When to look:

*All year. Breeds June to October*

Native pheasant up to 1 m, including tail. Plum rich brown above, coppery on wings; deep grey below; legs and feet dark grey.

Nest: domes, bulky; of sticks, bark, fern fronds and moss, on ground, bank, head of fern or to 25 m in tree fork.

Tail of male long and train-like, usually horizontal: two clubbed 'lyrates', about 60 cm long

### *Similar species:*

Similar to Albert's Lyrebird, which is restricted to an area around the Border Ranges, on the Queensland-New South Wales border. The Albert's Lyrebird is redder in colour and the male's tail is less elaborate.
