

Native Buttercup *Hibbertia hypericoides*

When to look:

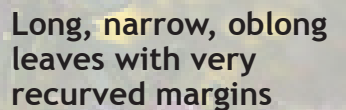

Flowering occurs from
April to December

Yellow flowers
with 5 petals

Erect spreading shrub that
grows 0.2-1 m in height

Long, narrow, oblong
leaves with very
recurved margins

Similar species:

There are many species of *Hibbertia*. Other species have differently shaped leaves (often sharply pointed) and stamens all around the centre of the flower.
